

Docking Station Video Stream in VLC

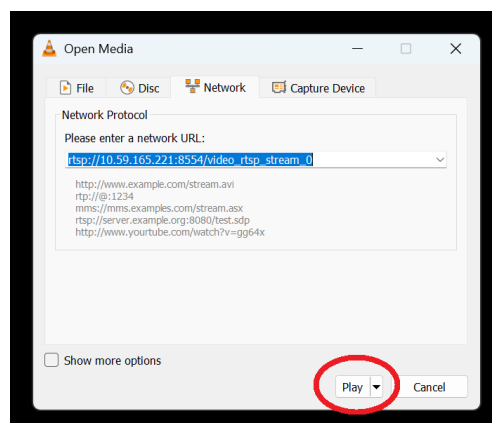

1. VLC Media Player is already installed and downloaded on the aquarium computers.
To play the video stream you must change some settings.
 - a. In the top tabs select **Tools > Preferences > Input/Codecs**
 - b. Scroll all the way down in the Input/Codecs menu and in the Live555 stream transport make sure that **RTP over RTSP (TCP)** is selected and hit Save.

- c. Then you can close that window
2. To view the video stream, go to the Media tab and select **Open Network Stream** (the keyboard shortcut for this is Ctrl+N). Input the RTSP link that BlueOS created.

- a. This is the link for the docking station camera -

rtsp://10.59.165.221:8554/video_rtsp_stream_0

3. Hit play and the stream will start!
